

Dual 42V Synchronous Monolithic Step-Down Regulator with 6.5 μ A Quiescent Current

DESCRIPTION

Demonstration circuit 2169A is a dual monolithic step-down DC/DC switching regulator featuring the LT[®]8616. The LT8616 is a high efficiency, high speed, dual synchronous monolithic step-down switching regulator that consumes only 6.5 μ A of quiescent current with both channels enabled. The demo circuit is designed for 5V, 1.5A and 3.3V, 2.5A outputs. Both channels contain all switches and necessary circuitry to minimize the external components and solution size. Fast minimum ON time of 35ns enables high V_{IN} to low V_{OUT} conversion at high switching frequency. Independent input voltage, feedback, soft-start and power good pins for each channel simplify complex power supply tracking/sequencing requirements.

The inputs of the two channels are connected on the demo board by default. They can also be separated by removing the 0 Ω resistor (R13) from the board. Each output can be independently disabled using its own EN/UV pin, while V_{IN1} must be connected to 3.4V or above even if only channel 2 is in use. The demo board has an EMI filter installed between V_{IN2} and V_{EMI} . To use the EMI filter, the inputs should be tied to V_{EMI} .

The switching frequency of both channels can be programmed either via an oscillator resistor or a common external clock up to 3MHz. The SYNC pin on the demo board is grounded by default for Burst Mode[®] operation.

To synchronize to an external clock, move JP1 to SYNC/MODE and apply the external clock to the SYNC/MODE turret. The R_T resistor (R5) should be chosen to set the LT8616 internal switching frequency at least 20% below the lowest synchronization input.

Low ripple Burst Mode operation increases the efficiency at the light load while keeping the output ripple low. Figure 1 and Figure 2 show the demo board efficiency for each channel at 12V input voltage in Burst Mode operation. Figure 3 shows the temperature rising on DC2169A demo board with different input voltages under full load conditions on both channels.

The LT8616 data sheet gives a complete description of the part, operation and application information. The data sheet must be read in conjunction with this demo manual for DC2169A. The LT8616 is assembled in a 28-lead plastic TSSOP package. Proper board layout is essential for both low EMI operation and maximum thermal performance. See the data sheet sections for details.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2169A>

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V_{IN1}	Channel 1 Input Supply Range		5.8		42	V
V_{IN2}	Channel 2 Input Supply Range		4.1		42	V
V_{OUT1}	Channel 1 Output Voltage		4.88	5.02	5.15	V
V_{OUT2}	Channel 2 Output Voltage		3.21	3.29	3.37	V
f_{SW}	Switching Frequency	$R_T = 14.7\text{k}\Omega$	1.85	2.05	2.25	MHz
I_{OUT1}	Channel 1 Max Output Current		1.5			A
I_{OUT2}	Channel 2 Max Output Current		2.5			A
EFE	Efficiency at DC	$V_{IN1} = V_{IN2} = 12\text{V}$, $I_{OUT1} = 1.5\text{A}$, $I_{OUT2} = 2.5\text{A}$		85.1		%

QUICK START PROCEDURE

DC2169A is easy to set up to evaluate the performance of the LT8616. Refer to Figure 4 for proper measurement equipment setup and follow the procedure below:

NOTE: When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the V_{IN} or V_{OUT} and GND terminals. See Figure 5 for the proper scope technique.

1. Place JP1 on the Burst Mode position.
2. With power off, connect the input power supply to V_{EMI} and GND. Make sure that the input voltage does not exceed 42V.
3. With power off, connect loads from V_{OUT1} to GND, and V_{OUT2} to GND.

4. Turn on the power at the input.
5. Check for the proper output voltages (5V and 3.3V).

NOTE: If there is no output, temporarily disconnect the load to make sure that the load is not set too high or is shorted.

6. Once the proper output voltages are established, adjust the load within the operating ranges and observe the output voltage regulation, ripple voltage, efficiency and other parameters.
7. An external clock can be added to the SYNC terminal when SYNC function is used (JP1 on the SYNC/MODE position). Please make sure that the SYNC frequency is at least 20% higher than the set switching frequency. See the data sheet section Synchronization.

DEMO MANUAL DC2169A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
