1 Description

CoolMOS™ is a revolutionary technology for high voltage power MOSFETs, designed according to the superjunction (SJ) principle and pioneered by Infineon Technologies. CoolMOS™ C6 series combines the experience of the leading SJ MOSFET supplier with high class innovation. The offered devices provide all benefits of a fast switching SJ MOSFET while not sacrificing ease of use. Extremely low switching and conduction losses make switching applications even more efficient, more compact, lighter, and cooler.

Features

- Extremely low losses due to very low FOM $R_{DS(on)} \cdot Q_g$ and E_{oss}
- Very high commutation ruggedness
- Easy to use/drive
- JEDEC¹⁾ qualified, Pb-free plating, Halogen free

Applications

PFC stages, hard switching PWM stages and resonant switching PWM stages for e.g. PC Silverbox, Adapter, LCD & PDP TV, Lighting, Server, Telecom and UPS.

Please note: For MOSFET paralleling the use of ferrite beads on the gate or separate totem poles is generally recommended.

Typ. capacitances	Typ. C_{oss} stored energy
<p>A semi-logarithmic plot showing capacitance C [pF] on the y-axis (log scale from 10⁰ to 10⁵) versus drain-source voltage V_{DS} [V] on the x-axis (linear scale from 0 to 600). Three curves are shown: C_{iss} (input capacitance) is constant at approximately 2 × 10⁴ pF; C_{oss} (output capacitance) starts at ~10⁴ pF at 0 V and decreases to ~10² pF at 600 V; C_{rss} (reverse transfer capacitance) starts at ~10⁴ pF at 0 V, drops to a minimum of ~10¹ pF at ~100 V, and then slightly increases to ~10² pF at 600 V.</p>	<p>A linear plot showing stored energy E_{oss} [μJ] on the y-axis (linear scale from 0 to 14) versus drain-source voltage V_{DS} [V] on the x-axis (linear scale from 0 to 600). The curve shows that E_{oss} increases from 0 at 0 V to approximately 12.5 μJ at 600 V.</p>

Forward characteristics of reverse diode
<p>A semi-logarithmic plot showing forward current I_F [A] on the y-axis (log scale from 10⁻¹ to 10²) versus reverse diode voltage V_{SD} [V] on the x-axis (linear scale from 0 to 2). Two curves are shown for different temperatures: 125 °C and 25 °C. Both curves show an exponential-like increase in current with voltage, with the 125 °C curve shifted to the left of the 25 °C curve, indicating higher current for the same voltage at higher temperature.</p>
